*Re: Withdrawal of the 2017 Shareholder Proposal*

The Company agreed to increased disclosures on its website on the following topics: for each play, quantity of fresh water used for shale operations, including source, as well as amount of recycled water for each play; goals and quantitative reporting on progress to reduce toxicity of drilling and completion fluids; quantitative reporting on methane leakage as a percentage of total production; percentage of drilling residuals managed in closed loop systems; numbers and categories of community complaints and alleged impact; reductions in air emissions including NOx and VOCs by play; practices for identifying and managing the hazards from naturally occurring radioactive materials. These disclosures are intended to assist investors in objectively evaluating the company's operational risks and the robustness of corporate risk management systems.
